

## Revenue Tracking is Automated and Comprehensive

The administration of a "National Spectrum Plan" requires comprehensive management of the finite spectrum resources available to a governmental authority. The iTMS manages the various administrative challenges including the tracking of all **License, Spectrum and Type Approval** fees. Current and historical revenue for every customer and all of their anniversary dates are maintained to support regulatory and fiscal compliance. Revenue is quickly verified by service provider and is tracked by revenue stream. In effect granular detail is available and the impact of this information, readily available and consistently accurate, is **optimized revenue capture**. The system will automatically calculate annual gross and adjusted revenue amounts for "Year End Government Reports". Future revenue estimates are formulated using accurate financial data.

## Flexible Management of all License and Frequency Fee Revisions

Telecommunications is driving the adoption of new technologies at a faster pace. As a result Spectrum Management is subject to quickly **evolving policies and regulations**. Your software must accommodate these changing technologies and regulations. The iTMS is flexible and designed for ongoing variation in licensing and fees. It easily accommodates changes to **annual percentage** calculations or **set fees** as well as updated **rates for frequency** use. New classifications in Amateur Radio, multiple Type Approval fees or new charges applied by an Authority or third party company are all processed and revenue collection is achieved at digital speed. The iTMS is a compliant and flexible system that can easily accommodate new fee structures efficiently.

## Decision Support: Financial Analysis and Reporting

Data integrity on all customer/providers is essential and empowers a Government Authorities' decisions. When all **frequencies and status** are readily presented **Occupancy Rates** can be scrutinized and may lead to further Licensing and Frequency Authorizations or simply improved allocation of frequency. Reports on Spectrum Utilization, Occupancy Rates and Revenue all contribute to improved Business Intelligence and optimal administration of the spectrum resource.

### HOW IT'S DONE

Comprehensive Revenue Tracking  
Responsive & Flexible Fee Management  
Financial Analysis and Reporting  
Automated Anniversary Dates  
Automated Invoicing

### AUTOMATED ANIVERSARRY DATES AND CERTIFICATES

The iTMS stores all "Anniversary Dates" and generates all approved "Certificates" automatically. Multiple license holders and multiple Type Approvals are easily viewable. License Compliance and Frequency Enforcement becomes efficient and effective.

### AUTOMATED INVOICE CREATION FOR EMAIL

The iTMS offers numerous "Administrative Efficiencies" including automated creation and generation of Invoices. Moreover, each customers' billing history resides in the database. Invoicing and review is easy and the overall reduction in data entry plus reduced time and effort can delay or even postpone additional growth in staff costs by automating critical operational duties.
